□ The S&P Indices Versus Active Funds (SPIVA) Scorecard report performance comparisons corrected for survivorship bias, shows equal- and asset-weighted peer averages, and provides measures of style consistency covering actively managed U.S. equity, international equity and fixed income mutual funds.

□ Underlying data is from the CRSP Survivor-Bias-Free U.S. Mutual Fund Database. To accommodate CRSP release schedules, SPIVA is published semi-annually with a fourteen week lag.

□ Over the five year market cycle from 2004 to 2008, S&P 500 outperformed 71.9% of actively managed large cap funds, S&P MidCap 400 outperformed 79.1% of mid cap funds and S&P SmallCap 600 outperformed 85.5% of small cap funds. These results are similar to that of the previous five year cycle from 1999 to 2003.

□ The belief that bear markets favor active management is a myth. A majority of active funds in eight of the nine domestic equity style boxes were outperformed by indices in the negative markets of 2008. The bear market of 2000 to 2002 showed similar outcomes.

□ Benchmark indices outperformed a majority of actively managed fixed income funds in all categories over a five-year horizon. Five year benchmark shortfall ranges from 2-3% per annum for municipal bond funds to 1-5% per annum for investment grade bond funds.

□ The script was similar for non-U.S. equity funds, with indices outperforming a majority of actively managed non-U.S. equity funds over the past five years.

A Unique Scorecard for the Active Versus Passive Debate

The Standard & Poor's Indices Versus Active Funds (SPIVA) Scorecard presents the performances of actively managed mutual funds as compared to benchmark indices. It reports cover U.S. equity, international equity and fixed income categories. The popularity of SPIVA stems from a few unique attributes:

- **Survivorship bias correction:** Many funds might be liquidated or merged during a period of study. However, for someone making an investment decision at the beginning of the period, these funds are part of the opportunity set. Unlike commonly available comparison reports, SPIVA removes this survivorship bias.
- **Apples-to-apples comparison:** Fund returns are often compared to popular benchmarks such as the S&P 500, regardless of size or style classification. An appropriate comparison would be to measure a fund's returns against the returns of a benchmark for that particular style and size category. SPIVA reports do this.
- **Asset-weighted returns:** Average returns for a fund group are often calculated using only equal weighting, which results in the returns of a \$10 billion fund affecting the average in the same manner as the returns of a \$10 million fund. An accurate representation of how investors fared in a particular period can be ascertained by calculating weighted-average returns, where each fund's return is weighted by net assets. SPIVA reports show both equal- and asset-weighted averages.
- **Style consistency:** SPIVA reports measure style consistency for each style category across different time horizons. Style consistency is an important metric because style drift (the tendency of funds to move away from their initial investment categorization) can have an impact on asset allocation decisions.
- **Data Cleaning:** SPIVA avoids double counting of multiple share classes in all count based calculations, where only the share class with bigger assets is used. Since this is meant to be a scorecard for active managers, index funds, leveraged and inverse funds and other index-linked products are excluded.

Subsequent pages give the only comprehensive, periodic and publicly available sources of such data. Previous reports are archived at www.spiva.standardandpoors.com.

Bear Market Myths

Over a full market cycle, one expects a majority of active managers to under perform benchmarks. This is borne out by the table below, which shows the percentage of actively managed U.S. equity funds outperformed by benchmarks in two five-year market cycles – 1999 to 2003 and 2004 to 2008.

Percent of active funds outperformed by benchmarks over market cycles

| Fund Category | Benchmark Index | 2004 to 2008 | 1999 to 2003 |
|------------------------|-------------------------|--------------|--------------|
| All Domestic Funds | S&P Composite 1500 | 66.21 | 50.76 |
| All Large-Cap Funds | S&P 500 | 71.90 | 53.41 |
| All Mid-Cap Funds | S&P MidCap 400 | 79.06 | 91.36 |
| All Small-Cap Funds | S&P SmallCap 600 | 85.45 | 69.38 |
| Large-Cap Growth Funds | S&P 500 Growth | 80.51 | 43.40 |
| Large-Cap Core Funds | S&P 500 | 77.55 | 55.12 |
| Large-Cap Value Funds | S&P 500 Value | 53.19 | 54.96 |
| Mid-Cap Growth Funds | S&P MidCap 400 Growth | 76.58 | 95.50 |
| Mid-Cap Core Funds | S&P MidCap 400 | 76.15 | 83.33 |
| Mid-Cap Value Funds | S&P MidCap 400 Value | 79.17 | 93.02 |
| Small-Cap Growth Funds | S&P SmallCap 600 Growth | 95.58 | 69.86 |
| Small-Cap Core Funds | S&P SmallCap 600 | 81.36 | 62.94 |
| Small-Cap Value Funds | S&P SmallCap 600 Value | 69.51 | 61.95 |

However, one of the most enduring investment myths is the belief that active management has a distinct advantage in bear markets due to the ability to shift rapidly into cash or defensive securities. We [dispelled this myth](#) in 2003 using the case study of the 2000 to 2002 bear market. The downturn of 2008 provided another case study. The results are similar, with under performance across all nine style boxes.

Percent of active funds outperformed by benchmarks in bear markets

| | 2008 | 2000 to 2002 |
|---------------------|------|--------------|
| All Large-Cap Funds | 54.3 | 53.5 |
| All Mid-Cap Funds | 74.7 | 77.3 |
| All Small-Cap Funds | 83.8 | 71.6 |
| Large Growth | 90.0 | 49.4 |
| Large Core | 52.0 | 53.4 |
| Large Value | 22.2 | 36.5 |
| Mid Growth | 89.0 | 82.4 |
| Mid Core | 62.3 | 70.2 |
| Mid Value | 67.1 | 82.8 |
| Small Growth | 95.5 | 87.5 |
| Small Core | 82.5 | 70.8 |
| Small Value | 72.6 | 58.3 |

Report 1: Percentage of U.S. Equity Funds Outperformed by Benchmarks

| Fund Category | Comparison Index | One Year | Three Year | Five Year |
|------------------------|----------------------------|-----------------|-------------------|------------------|
| Domestic Equity | | | | |
| All Domestic Funds | S&P Composite 1500 | 64.23 | 70.21 | 66.21 |

Appendix A

SPIVA Styles and Lipper Fund Classifications

The CRSP Survivor-Bias-Free US Mutual Fund Database is the only complete database of both active and liquidated/merged mutual funds. It was created in 1995 and contains fund data from December 1961. Current and historical data from August 1998 has been supplied by Lipper and Thomson Reuters. The fund classifications are based upon the Lipper fund classification system. The SPIVA reports cover domestic equity, global equity and global fixed income categories.

U.S. Equity

SPIVA covers major capitalization levels (large-, mid-, small-, and multi-cap funds) and investment styles (growth, core and value). S&P uses the Lipper fund classifications, which determines a fund portfolio's capitalization and investment style assignments.

Lipper assigns a market-capitalization for each fund based upon the percentages of a fund's three-year weighted equity assets that fall into each of Lipper's three defined market-capitalization slices. The market capitalization breakpoints are calculated using all common stocks, excluding all non-US domiciled stocks and ADRs, trading on the NYSE, AMEX and NASDAQ. Funds are assigned to the capitalization level in which they have a 75% or higher weighting. Any fund that has less than 75% of their three-year weighted allocation in any of the three market capitalization ranges is classified as a multi-cap fund.

For investment style selection, the Lipper classification system uses three-year fundamental portfolio characteristics (price/earnings, price/book, and three-year sales-per-share growth) and, if necessary, confirming secondary characteristics (price-to-sales and price-to-operating cash flow). Fund statistics are compared to their relevant S&P capitalization-level index to determine the growth, core or value style.

In some cases, S&P combines closely-related Lipper fund classifications in one SPIVA category. Exhibit 1 maps the SPIVA U.S. Equity fund categories to Lipper classifications.

Exhibit 1**U.S. Equity Category Mappings**

| SPIVA Category | Lipper Fund Classification |
|------------------------|--|
| Large-Cap Growth Funds | Large-Cap Growth Funds |
| Large-Cap Core Funds | Large-Cap Core Funds |
| Large-Cap Value Funds | Large-Cap Value Funds Equity Income Funds |
| | |
| Mid-Cap Growth Funds | Mid-Cap Growth Funds |
| Mid-Cap Core Funds | Mid-Cap Core Funds |
| Mid-Cap Value Funds | Mid-Cap Value Funds |
| | |
| Small-Cap Growth Funds | Small-Cap Growth Funds |
| Small-Cap Core Funds | Small-Cap Core Funds |
| Small-Cap Value Funds | Small-Cap Value Funds |
| | |
| Multi-Cap Growth Funds | Multi-Cap Growth Funds |
| Multi-Cap Core Funds | Multi-Cap Core Funds |
| Multi-Cap Value Funds | Multi-Cap Value Funds |
| | |
| Real Estate Funds | Real Estate Funds |

International Equity

For International Equity, SPIVA reports on four major categories (Global, International, International Small Cap and Emerging Markets funds) of interest to global asset allocators. These categories also include multiple Lipper capitalization/style classifications.

Exhibit 2

Global Equity Category Mappings

| SPIVA Category | Lipper Fund Classification |
|-------------------------------|--|
| Global Funds | Global Large-Cap Growth Funds Global Large-Cap Core Funds Global Large-Cap Value Funds Global Multi-Cap Growth Funds Global Multi-Cap Core Funds Global Multi-Cap Value Funds |
| International Funds | International Large-Cap Growth Funds International Large-Cap Core Funds International Large-Cap Value Funds International Multi-Cap Growth Funds International Multi-Cap Core Funds International Multi-Cap Value Funds |
| International Small-Cap Funds | International Small/Mid-Cap Growth Funds International Small/Mid-Cap Core Funds International Small/Mid-Cap Value Funds |
| Emerging Markets Funds | Emerging Markets Funds |

Fixed Income

SPIVA reports on eight domestic, two global and three municipal fixed income categories. The Lipper domestic fixed income classifications are based upon maturity and credit quality. For maturity, long is 10+ years, intermediate is 5-10 years, short/intermediate is 1-5 years and short is 1-3.5 years. For credit quality, bonds are assigned to the U.S. Treasury, U.S. Government (includes Government and agency issues), A- or BBB-rated and High Yield classifications. Lipper also includes U.S. Mortgages and GNMA classifications.

In global fixed income, Lipper differentiates between global (including the U.S.) and international (excluding the U.S.) objectives. For municipal debt funds, we include the general (invests in the top four credit ratings) classification plus two state funds (California and New York).

Exhibit 3

Fixed Income Category Mappings

| SPIVA Category | Lipper Fund Classification |

Appendix B Glossary - Reports

Percentage of Funds Outperformed by the Index

To correct for survivorship bias, we use the opportunity set available at the beginning of the period as the denominator. We determine the count of funds that have survived and beat the index. We then report the index outperformance percentage.

Survivorship (%)

This measure calculates the percentage of funds that are still active at the end of the time period as at the beginning of the time period.

Style Consistency (%)

This calculation shows the percentage of funds that had the same style classification at the end of the time period as at the beginning of the time period.

Equal-Weighted Fund Performance

Equal-weighted returns for a particular style category in a month are determined by calculating a simple average return of all active funds in that category in that particular month.

Asset-Weighted Fund Performance

Asset-weighted returns for a particular style category in a month are determined by calculating a weighted average return of all funds in that category in that particular month, with each fund's return being weighted by its total net assets. Asset weighted returns are a better indicator of fund category performance measurement because they more accurately reflect the returns of the total money invested in that particular style category.

Quartiles Breakpoints

The p th -percentile for a set of data is the value which is greater than or equal to $p\%$ of the data, but is less than or equal to $(100 - p)\%$ of the data. So, it is a value that divides the data into two parts: the lower $p\%$ of the values and the upper $(100-p)\%$ of the values. The first quartile is the 75th percentile, the value separating the elements of a population into the lower 75% and the upper 25%. The second quartile is the 50th percentile and the third quartile is the 25th percentile. For fund category quartiles in a particular time horizon, the data used is the return of the largest share class of the fund net of fees, but excluding loads.

Survivorship Bias

Many funds might liquidate or merge during a period of study. Most of these occur because of continued poor performance by the fund. Therefore, if index returns are compared to fund returns using only surviving funds, the comparison would be biased in favor of the fund category. These reports remove this bias by (a) taking all available funds in that particular category as the investment opportunity set as the denominator for outperformance calculations, (b) explicitly showing the survivorship rate in each category, and (c) constructing peer average return series for each category based on all available funds at that period of time.

Fees

The fund returns used are net of fees, excluding loads.

Appendix B Glossary – Indices

Indices¹

A benchmark index provides an investment vehicle to compare and assess fund performance.

U.S. Equity:

S&P 500 Index

Widely regarded as the best single gauge of the U.S. equities market, this market capitalization-weighted index includes a representative sample of 500 leading companies in leading industries of the U.S. economy and provides over 80% coverage of U.S. equities.

S&P MidCap 400 Index

This index consists of 400 mid-sized companies and covers approximately 7% of the U.S. equities market.

S&P SmallCap 600 Index

This index consists of 600 small-cap stocks and covers approximately 3% of the U.S. equities market.

S&P Composite 1500 Index

This is a broad market, capitalization-weighted index of 1500 stocks. This index is comprised of three size-based indices: the S&P 500 Index, the S&P MidCap 400 Index, and the S&P SmallCap 600 Index, which measures the performance of large-, mid- and small-cap stocks respectively. This index represents 90% of U.S. equities.

S&P 500 Growth and Value Indices

These indices are an exhaustive, multi-factor style series covering the entire market capitalization of the S&P 500. Constituents, weighted according to market cap, are classified as growth, value or a mix of growth and value.

S&P MidCap 400 Growth and Value Indices

These indices are an exhaustive, multi-factor style series covering the entire market capitalization of the S&P MidCap 400.

S&P SmallCap 600 Growth and Value Indices

These indices are an exhaustive, multi-factor style series covering the entire market capitalization of the S&P SmallCap 600.

S&P Composite 1500 Growth and Value Indices

These indices are an exhaustive, multi-factor style series covering the entire market capitalization of the S&P Composite 1500.

S&P United States REIT Index

This index measures the investable universe of publicly traded real estate investment trusts.
